

CLEAR

STATE OF THE ART WATER MANAGEMENT

STAGE 1 Copper/Silver Ionization System:

This helps dramatically reduce the amount of sanitizer you will have in your spa. Positively charged mineral ions are attracted to negatively charged particulates and helps the filter to work at its optimum performance.

STAGE 2 Magnetic Field:

In conjunction with the copper/silver ionization, this tee Water passes by the powerful magnetic field which polarizes molecules and gives water a positive (+) charge. This gives a silky smooth feel and eliminates the need for adding chemicals.

STAGE 3 UVC Sanitizer:

This is used to sanitize water in EPA-approved devices with little to no chemical sanitizer. Ultraviolet light is used by passing water over a focused wavelength ultraviolet (UV) lamp.

STAGE 4 Ozone Generator:

Ozone allows you to use less chemicals. Ozone is a gas that eliminates particulates in the water and breaks down chloramines via oxidation.
